PROFILE

I am a self-taught developer with a passion for cutting-edge technology, and creating innovative solutions for clients. I am seeking a team role that will help me grow my skills while becoming an invaluable asset.

WORK

Aéro

Aéro – As a Flutter developer, I collaborated with an UpWork client to develop a progressive web app for cyclists. The app uses the MapBox API to provide users with a safe route, and display turn-by-turn navigation. Then helped them deploy it using Firebase Hosting.

Breezy Checks

Recently, I successfully published my first app on the Play Store, a check book register using Flutter, that exemplifies my working knowledge of a CRUD (Create, Read, Update, Delete) app, and state management using Riverpod.

PROJECTS

Bugtracker

A work in progress, leveraging Vite, HTML, Material UI, TypeScript, React, Redux Toolkit, and React Router. That builds a helpful system to create, read, update, and delete, tickets, and stories, from a Firebase Firestore database.

Wizard Shop

Utilized HTML, CSS, JavaScript, and Font Awesome icons to create a unique demo e-commerce shop, and shopping cart.

Portfolio

Utilized HTML, Tailwind CSS, and SolidJS to create reusable components that render my portfolio. Implemented signals that facilitate specific component re-rendering instead of refreshing the entire DOM.

SKILLS

- Proficient in programming languages, and frameworks such as Dart, TypeScript, JavaScript, Python, Flutter, and React.
- Skilled in utilizing software and services like Figma, Firebase, Git, and Github.
- Fluent in both English, and Spanish.

EDUCATION

freeCodeCamp.com Certifications

(May 2023 – Current)

- Responsive Web Design
- JavaScript Algorithms and Data Structures
- Front End Development Libraries
