Front-End Developer

Pablo Cardoso

Hutto,Texas, USA

PROFILE

I am a self-taught developer who loves "geeking out" about the latest technology, and learning the best way to implement them. I enjoy starting new projects that pique my curiosity, and am adept at fighting against scope creep. I am seeking a team role that will help me grow my skills while becoming an invaluable asset to the team.

WORK

Aéro

As a Flutter developer, I collaborated with an UpWork client to develop a web application for cyclists. The app uses the MapBox API to provide users with a safe route, and display turn-by-turn navigation.

Breezy Checks

Recently, I successfully published my first app on the Play Store, a check book register using Flutter, that exemplifies my working knowledge of a CRUD (Create, Read, Update, Delete) app, and state management using Riverpod.

PROJECTS

Wizard Shop

Utilized HTML, CSS, JavaScript, and Font Awesome icons to create a unique demo e-commerce shop, and shopping cart.

Portfolio

Utilized HTML, CSS, SolidJS, and Tailwind CSS to create reusable components that render my portfolio. Implemented signals that facilitate specific component re-rendering instead of refreshing the entire DOM.

SKILLS

- Proficient in programming languages, and frameworks such as Dart, JavaScript Python, and Flutter
- Skilled in utilizing software and services like Figma, Firebase, and Git
- Fluent in both English and Spanish

EDUCATION

freeCodeCamp.com Certifications

(May 2023 – Current)

- Responsive Web Design
- JavaScript Algorithms and Data Structures
